

1. Coupling

1.1.Content coupling

Related modules	Description	Improvement Direction
none		

1.2.Common coupling

Related modules	Description	Improvement Direction
SecurityConfig	Using a static singleton instance WHITE_LIST, share with JwtFilter	Modify JwtFilter to accept the WHITE_LIST array as a parameter by adding an attribute whitelist, in SecurityConfig, use dependency injection to provide the WHITE_LIST array to JwtFilter
Regex	Using static variables to contain regular expressions to check inputs	Keep it the same as this is an utility class

1.3.Control coupling

Related modules	Description	Improvement Direction
none		

1.4.Stamp coupling

Related modules	Description	Improvement Direction
CartService	addToCart and checkProductExistIncart are taking the whole User as parameter,but only need user email	Passing only String email instead of User user.
JwtService	generateToken takes the whole User userDetails but only use role and username attribute	Passing only String userRole and String username instead of User userDetails
ProductService	getWishList are taking the whole User but only user email	Passing only String userMail instead

1.5.Data coupling
